Mr. Jackson,

The units are working so well that I just had to let you know. In the two years that we have been using them we have seen an 8.3% saving on our electrical usage. There have been two additional advantages other than the savings. First we had many "brown outs" in our industrial park and this has eliminated them all together which is a plus for all of our electronic equipment. The second advantage is if the power goes out our fluorescent lights in the office remain on at approximately half power.

I look forward to you installing new units in our other two facilities.

Thank you,

Thomas Miskewitz
President
